

A whole new way to translate Websites and Web programs

The quickest, easiest and cheapest translation of a Website or a Web program can be done with SAAS translator.

No source code changes are necessary, and anybody with language skills can conduct the translation. The result can be seen directly on your computer (WYSIWYG).

SAAS Translator is installed as a plug-in for Internet Explorer or Mozilla Firefox and translates simultaneously when the web application is running.

The major advantages over traditional implementation of translation in source code on a server are that translation with SAAS Translator can easily be conducted by anybody, and that the web program's source code does not need to be changed or re-tested for quality. This entails major savings in time and cost, and makes it easy to outsource the translation project.

SAAS Translator can be used to translate pages such as Internet banking, booking sites (cars, flights, travel, etc.) CRM programs, business systems, online stores, etc.

Try SAAS Translator!

Visit <http://www.hemnet.se/> and click on a flag

Try translating a web page for free!

To do a translation, click on a word or sentence on the web page, translate it and click on Save. Then go on to the next word/sentence. When the whole web page or web application has been translated, store the dictionary file centrally on a server so that others can also access the translation.
